

DATA AND PRACTICES

DR ANJALI KULKARNI

VP-4BASECARE RWD STRATEGY AND ANALYTICS

WHY COMPUTER ENGINEERS
SHOULD NOT BE SURGEONS

CLINICAL DATA FORMATS

Text , Numerical data

HW-ST911	the unique instrument name
111	the run id
C0N4WACXX	the flowcell id
5	flowcell lane
1101	tile number within the flowcell lane
2249	'x'-coordinate of the cluster within the tile
2216	'y'-coordinate of the cluster within the tile
1	the member of a pair, 1 or 2 (paired-end or mate-pair reads only)
Y	Y if the read is filtered, N otherwise
18	0 when none of the control bits are on
TTAGGC, CGATC	index sequence

ECG Signals

Imaging data

Complex Genomic VCF , FASQ

Today, approximately 30% of the world's data volume is being generated by the healthcare industry.

Real World data market is set to increase to 1.66billion \$ by 2029

COMPLEXITY OF HEALTH CARE DATA

Sources of training data	Data structure types	Data locations
<ul style="list-style-type: none">■ Images■ Videos■ Emails■ Documents, PDFs■ Quantitative data from databases■ Spreadsheets■ Text content■ Voice and audio	<ul style="list-style-type: none">■ Structured data<ul style="list-style-type: none">□ Queryable with a well-defined schema■ Unstructured data<ul style="list-style-type: none">□ No well-defined schema, not queryable■ Semi-structured data<ul style="list-style-type: none">□ Limited structure and queryability	<ul style="list-style-type: none">■ On-premises databases■ Data warehouses■ Data Lakes■ Cloud sources■ Edge devices■ Hybrid■ Sensors/IoT

- Automated & Assisted Diagnosis and Treatment
- Real-time Patient Prioritization and Triage
- Pregnancy Management
- Health Assistants and Personal Trainers

- Data Mining and Analytic
- Drug Discovery
- Drug Design
- Pandemic Detection
- Vaccine Development

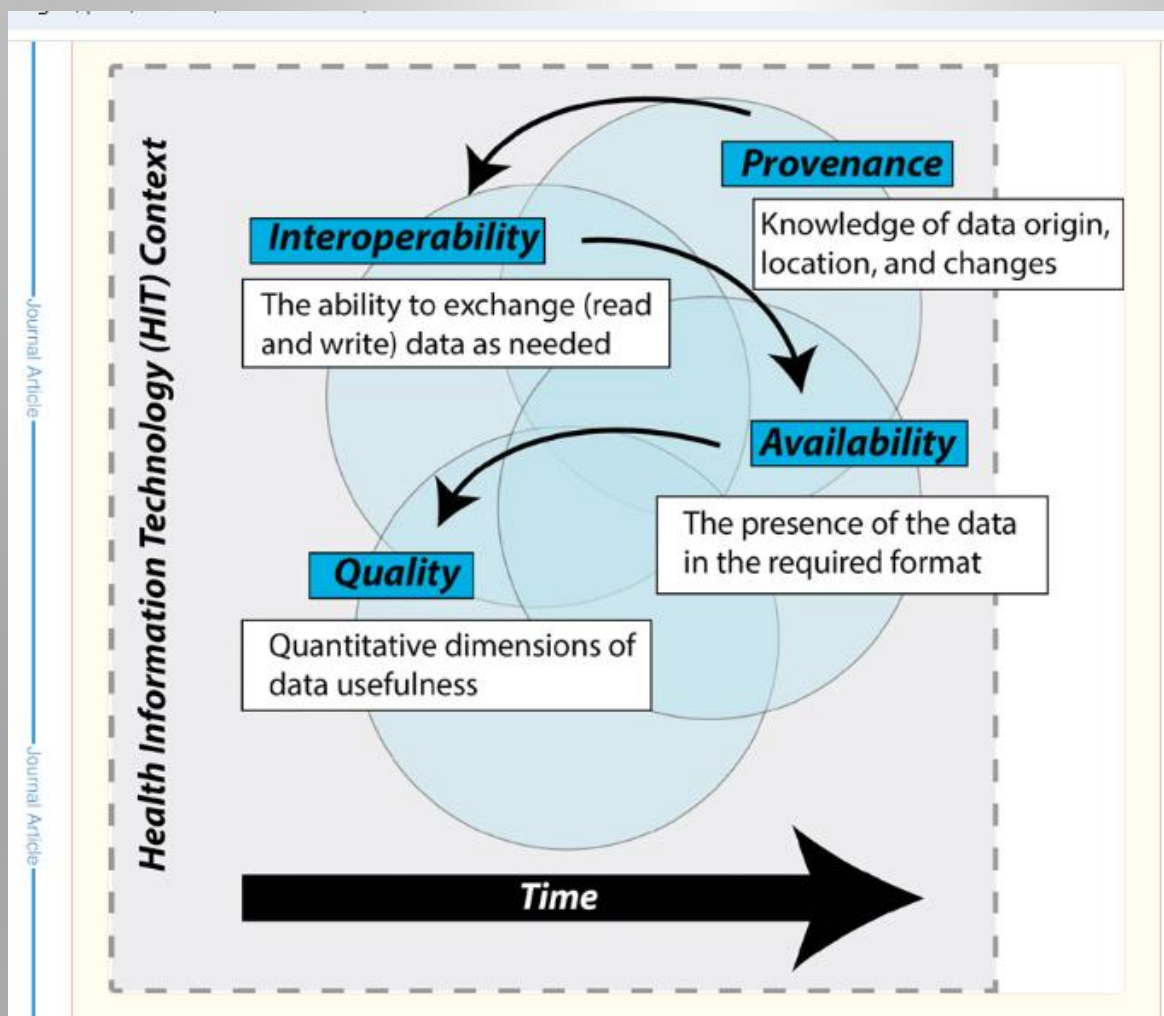

- Error Free Diagnostic results
- Intelligent Symptom Analysis
- Predictive and Early diagnostic!
- Radiology Assistant
- Diagnosis via Medical Imaging

- Surgical Robots
- Personalized medications & care
- Clinical Trials
- Alternative Diagnosis Prescription auditing

SYNTHETIC DATA

- **Synthetic data is artificially generated data that mimics the structure and properties of real-world data.**
- It is created using mathematical models and algorithms to generate realistic datasets without compromising privacy.
- Used in clinical trials , researchers can use synthetic data to create a so called “synthetic control arm”
- Using synthetic data for healthcare research brings many benefits, including privacy protection, data availability, scalability, research collaboration, reproducibility, and addressing issues related to data bias and representativeness.

Data Readiness conceptual framework

Radiation Oncology data burden !!

Standardization in healthcare data collection and management is very important

Making Data Computable

Standards, Terminologies, and Ontologies Widely Used in Clinical Medicine.*

Type of Data	Ontology	Example of Term
Diagnoses	Systematized Nomenclature of Medicine Clinical Terms (SNOMED CT) ICD Orphanet Rare Disease Ontology (ORDO) National Cancer Institute Thesaurus (NCIT)	Triple-negative breast carcinoma (NCIT:C71732)
Phenotypic abnormalities	Human Phenotype Ontology (HPO)	Bronchopulmonary sequestration (HP:0010960)
Medications	RxNorm DrugBank ChEMBL	Panobinostat (CHEMBL483254)
Adverse reactions	Ontology of Adverse Events (OAE)	Injection-site induration (OAE:0000323)
Procedures	Medical Dictionary for Regulatory Activities (MedDRA)	Cardiac aneurysm repair (MEDDRA/10007514)
Laboratory examinations	Logical Observation Identifiers Names and Codes (LOINC)	Creatinine in serum or plasma (LOINC:2160-0)
Imaging data	Digital Imaging and Communications in Medicine (DICOM) RadLex	Periosteal cortical thinning (RID45761)

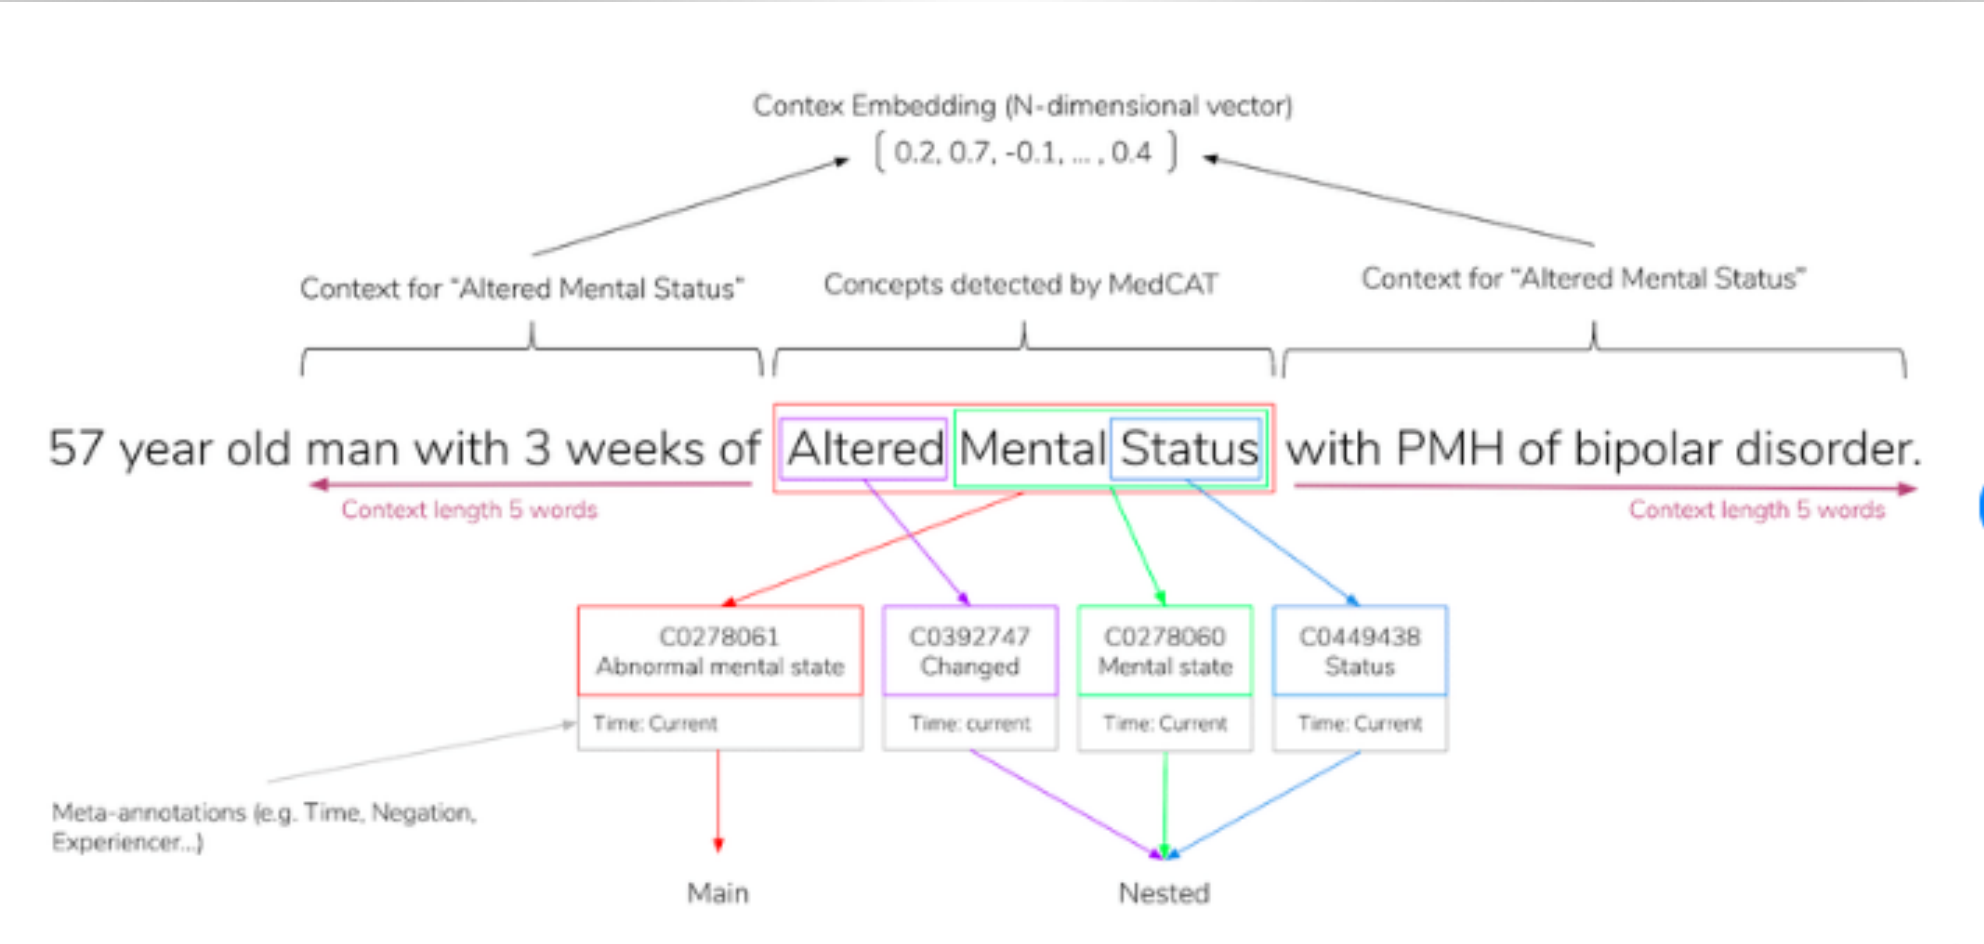

Ontologies differ from terminologies in that ontologies define relationships between concepts in a way that allows computational logical reasoning, enabling the drawing of conclusions from related assertions

Major challenge in the unstructured clinical notes

LOOK AT THIS EMAIL FROM MY DOCTOR. I MEAN, WHERE DID HE EVEN **GET** THAT FONT?!

Natural Language processing –NLP

Need for Natural language processing (NLP) to derive insights

1

Information Extraction: Extraction of drugs, events, diseases through named entity recognition

2

Specific clinical insight or question answering: Provide answers to clinical questions after extracting entities from unstructured text

3

Clinical Decision Support Systems: Build clinical decision support systems by extracting various useful information for making diagnosis and therapeutic decisions,

4

Medical Resource Allocation: building patient triage systems, so that medical resources can attend to critical cases with priority

5

Patient Clinical Data Summarization: Extract and summarize longitudinal patient clinical journey

6

Clinical Research: NLP may enable efficient clinical trial design. Patient recruitment, clinical trial analytics

7

Mental /Occupational Health Monitoring: NLP-driven smart healthcare has great value in predicting/diagnosing and treating mental health conditions.

8

Drug Review and Safety Monitoring Adverse drug events discovery and drug safety monitoring

Digital transformation and AI knocking--

- ✓ Adopt the digital applications
- ✓ Periodic data quality checks
- ✓ Data audits
- ✓ Training Good Data practices

Thank you
